

# EUROTRAMP®

## Aqua NoWa BOUNCER®

For training, therapy, prevention und fun

Eurotramp is revolutionizing the aqua-fitness-field!

As a specialized manufacturer of high quality trampolines (for Olympic Games, World Championships, shows, events, schools, recreation parks, etc.) we offer a totally new sporting apparatus of the highest quality to be used under water – permanently, due to components which are resistant to chlorine water.

The underwater trampoline, which was designed in cooperation with an experienced expert from the aqua-fitness industry, aims at different target groups; the entirely new feeling of swinging and jumping in the water inspires everyone, immediately!

There are many ways to use the Aqua-NoWa BOUNCER®, which is soft on the joints: rehabilitation, therapy, training, fun, etc.

The combination with other aquafitness apparatus such as weights, barbells, therapy straps, pool noodles, etc., allows exercises that aim at the whole body.

With the Aqua-NoWa BOUNCER® comes along a DVD with all the information needed to erect the underwater trampoline, how to care for it and what safety measures must be considered. Preview on the special training DVD included.

The training DVD, which is available from our vendors, includes a large variety of different exercises. For more information go to [www.underwatertrampoline.com](http://www.underwatertrampoline.com).

The Aqua NoWa BOUNCER® can be used with:

- General physiotherapy
- Rehabilitation
- Aqua gym for different target groups
- Introducing beginners to swimming
- Coordination therapy for those who are physically limited (apoplexy patients, patients with palsy, MS patients, etc.)
- Training for semi-professional and professional sportsmen
- Fat-burning training, from little weight losses to using large amounts of calories.
- Sports for those with disabilities.
- Fun and action for everyone.
